

# Intelligent Data Distribution via HotCopy

## More Online-Propagation, Less FTP-Transfer

Are you faced with the task of creating new interfaces for proven OS390/MVS applications? Do you distribute or deliver data to distant applications, i.e. data warehouses, by FTP or similar file transfers? Do you also have to live with the disadvantages of such solutions like the lack of topicality and protracted processing?

This is no longer necessary. Standard software is available which reduces maintenance time of your interfaces, speeds up your data transfers and keeps them current. It allows the initial loading of distant data resources and subsequently just to add changes periodically. This software is called HotCopy.

HotCopy permits extraction and propagation of application data without programming. This means: As soon as data are added, changed or deleted from the existing host application, HotCopy will recognize this event. The change is propagated immediately by cross-memory-technology to another location. This location may be any target file or table, or an IBM MQ-series message queue, or, when HotCopys makes use of its own Message Service to transport the data, another DBMS/platform.

No program will have to be changed; HotCopy offers an ISPF based user interface to simply configure the propagation process. And it is a powerful tool: It can manage just about everything creative programmers invented: all record types with record identifier fields, data groups, arrays, "occurs depending" structures, etc. HotCopy can propagate from IMS, CICS or from Batch, it supports DL/1, DB2, VSAM, SAM. HotCopy is also flexible and modular, even special requests can be accommodated. HotCopy features a healthy cost vs. performance ratio.

If improved data distribution is of importance at your business, it might be of interest for you to get additional information about HotCopy. HotCopy is the new tool for flexible, dependable and comfortable data transmission. Immediate information is available when you call us or your local distributor. Our competence is at your disposal.
